

Soper Creek Subwatershed Study Public Information Centre #2

Thursday, April 10, 2025

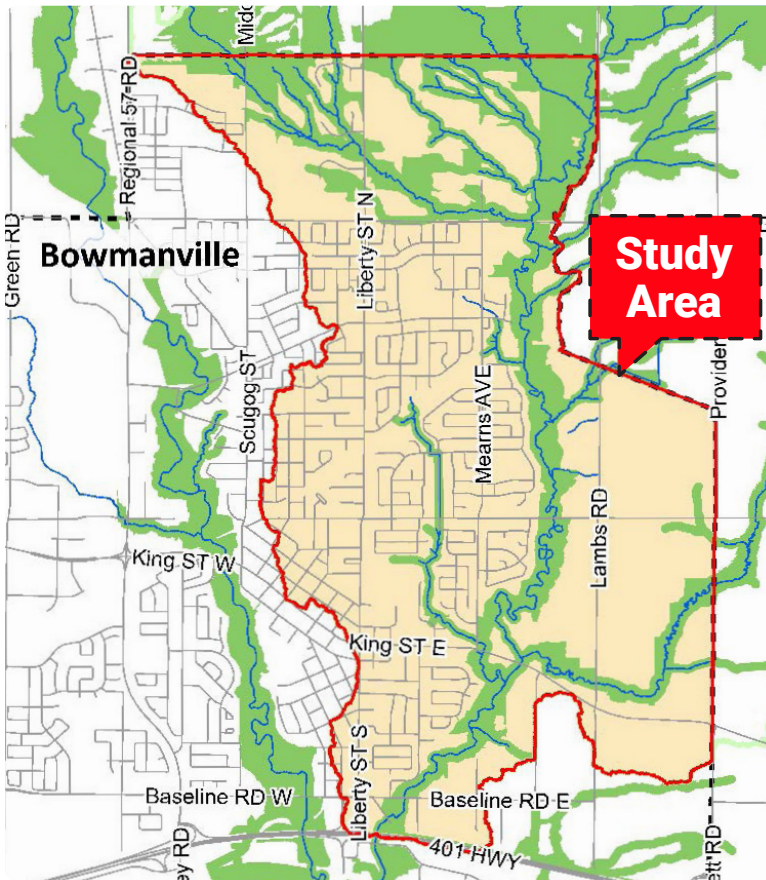

Presentation begins at 6:30 p.m.

Garnet B. Rickard Complex

2440 Highway 2, Bowmanville – Hall 2

You're invited!

Join us at Garnet B. Rickard Complex on Thursday, April 10, at 6:30 p.m. for a second Public Information Centre to learn about the Phase 2 & 3 report of the Soper Creek Subwatershed Study. The study focuses on the areas of the subwatershed located within the Bowmanville Urban Area.

What is a subwatershed study?

A subwatershed study provides detailed information about environmental features, like streams, woodlots and wetlands, and recommendations on how to protect and enhance them.

There are three phases to a subwatershed study:

Phase 1: Document existing environmental features and relationships

Phase 2: Develop a management strategy

Phase 3: Outline recommendations for land use plans and identify any further studies

To obtain this information in an alternate format,
call 905-623-3379 ext. 2131, TTY: 1-844-790-1599.

Clarington

What is a Phase 2 & 3 report?

The Phase 2 & 3 report provides a strategy and recommendations for protecting and enhancing environmental features in the subwatershed area. These recommendations and strategies, which include vegetative buffers, low-impact development techniques, and stormwater management controls, will inform the drafting of the Soper Hills and Soper Springs Secondary Plans, as well as future development patterns in these areas.

The foundation of these recommendations was the Phase 1 Existing Conditions report, which was completed in December 2022. It characterized groundwater, surface water and ecological resources as well as flooding and erosion, the natural heritage system and headwater drainage features within the study area.
